

AMENDMENTS TO THE ABSTRACT:

A method of fixing support means disposed within an evacuated glass pane, ~~said evacuated glass panel, which~~ includes at least two planar glass sheets having ~~any shape, and~~ support means disposed therein, ~~said fixing method including~~ includes the following steps: at first ~~apply~~ a solution layer is applied on the surface of a planar glass sheet, on which the support means is disposed; secondly, ~~place~~ the support means are placed on the said solution layer; and ~~at last cover~~ the upper surface of the support means is covered with a planar glass sheet. The ~~, and heat said~~ solution layer is heated to dry~~[[,]]~~ so as to fix the ~~said~~ support means between planar glass sheets. ~~The present invention by way of fixing the support means on surface of planar glass sheet through adhesion to reduce or entirely overcame the movement of support means between planar glass sheets, thereby increase the mechanical strength and improve the quality of evacuated glass panel.~~
